4. Remediation Guidance

IDOR

1. Implement strict Authorization and Access Control checks on *every* request attempting to access, modify, or delete a resource.
2. Verify that the currently authenticated user session actually owns or has explicit permission to access the requested Object ID.
3. Replace predictable, sequential integer IDs with unpredictable, mathematically secure identifiers (e.g., UUIDv4 or GUIDs).
4. Ensure the API does not blindly trust client-provided IDs for operations affecting the current user's profile or financial state.
